Start of Claim Amendments

=====

1. (Currently Amended): A method of production of a steel product with a nanocrystallized surface layer,

said method ~~characterized by~~ comprising the steps of:

(1) subjecting a surface layer of a steel product to ultrasonic impact treatment by impacting it at a plurality of different directions and angles using one or more ~~three~~ ultrasonic indenters, wherein said one or more indenters comprise three indenters joined at their tips such that the tips of the ultrasonic indenters vibrate in a plurality of different directions ~~wherein said one or more ultrasonic indenters vibrate in a plurality of different angles~~, with said ultrasonic impact treatment of said surface layer providing equiaxial grains in said surface layer, then,

(2) subjecting the surface subjected to the ultrasonic impact treatment to heat treatment at 100° to 500°C for 15 minutes or more to cause precipitation of nanocrystals.

8. (Currently Amended) A method of production of a steel product with a nanocrystallized surface layer as set forth in claim 1, ~~wherein said one or more indenters comprises three ultrasonic indenters, and~~ wherein at least one of the

indenters is arranged to provide an incident angle with respect to the surface layer of the steel product of 30 degrees or more.

9. (Currently Amended) A method of production of a steel product with a nanocrystallized surface layer as set forth in claim 1, ~~wherein said one or more indenters comprise three indenters, and~~ wherein the three indenters are arranged at 120 degrees from each other.

11-12. (Canceled)

15. (New): A method of production of a steel product with a nanocrystallized surface layer,

said method comprising the steps of:

(1) subjecting a surface layer of a steel product to ultrasonic impact treatment by impacting it at a plurality of different directions using one or more ultrasonic indenters made to simultaneously vibrate in the vertical direction and the horizontal direction with said ultrasonic impact treatment of said surface layer providing equiaxial grains in said surface layer, then,

(2) subjecting the surface subjected to the ultrasonic impact treatment to heat treatment at 100° to 500°C for 15 minutes or more to cause precipitation of nanocrystals.

16. (New) A method of production of a steel product with a nanocrystallized surface layer as set forth in claim 15, characterized in that said ultrasonic impact treatment produces an amorphous state in said surface layer.

17. (New) A method of production of a steel product with a nanocrystallized surface layer as set forth in claim 15, characterized in that said ultrasonic impact treatment is accompanied with mechanical alloying.

18. (New) A method of production of a steel product with a nanocrystallized surface layer as set forth in claim 15, characterized by making an amorphous phase and a nanocrystal phase copresent in precipitation of said nanocrystals.

19. (New) A method of production of a steel product with a nanocrystallized surface layer as set forth in claim 15, characterized by shielding the surroundings at the time of said ultrasonic impact treatment from air.

20. (New) A method of production of a steel product with a nanocrystallized surface layer as set forth in claim 15, wherein said ultrasonic impact treatment is by impacting said surface at a plurality of different directions using one indenter made to turn or rock.

21. (New) A method of production of a steel product with a nanocrystallized surface layer as set forth in claim 15, wherein a temperature of the ultrasonic impact treatment is made to be a temperature lower than the recrystallization temperature of the steel.
